I got this game super cheap but I found it just wasn't for me. I get the sense this is a sole developer, not a team or anything like that. Hats off, he's done more than I could. What I thought this game would be, based on the description, would be a fairly

simple space combat simulator. Take Freelancer, strip out the mining, trading, and exploration, replace all that with loot and upgrades, so then you get something like Diablo in space right? Action combat with some RPG elements? Unfortunately it just doesn't work. It plays more like a tech demo or proof of concept than an actual game.. Contains game breaking bugs. Was unable to continue past the first level as the warpgate never spawned. Other bugs were problematic including being able to "repair" your ship and spend resources at max life (thus just costing resources for no gain) and a few other collision issues. The controls are a bit clunky too, there is no tutorial, and there isn't much depth (at least from what I experienced). The game is fun for a few minutes, but the inability to continue the game just makes it pointless.. . Actually a decent game with a steep learning curve which can be frustrating. Good graphics and smooth gameplay but a decent 3d space shooter overall.. . I waited an extra 2 minutes just to post this review: this game is really bad and you shouldn't play it!!!!. I waited an extra 2 minutes just to post this review: this game is really bad and you shouldn't play it!!!!. AI arcade space action - You will never spent a better u00a31.99. Pulse pounding not stop action. with some nice missions and upgrades. The 3d flight engine is very good. Great sound and grafixs. playing at 2050x1080 looks good..
